Sample Citation and Introduction to Citing Books and Other Individual Titles in Audiovisual Formats

The general format for a reference to an individual audiovisual title, including punctuation:

Examples of Citations to Books and Other Individual Titles in Audiovisual Formats

Audiovisuals include videocassettes, audiocassettes, videodiscs, motion pictures, and slides. CD-ROMs and DVDs are considered electronic material (see Chapters 18 - 21 for citing Material on CD-ROM, DVD, or Disk); for videocasts and podcasts see Chapters 22 - 26 for citing material on the Internet.

An audiovisual may be published in monograph form, such as a book on videodisc, or in journal form, distributed on videocassette or audiocassette. Cite audiovisuals using the standard format for journals and books (see Chapter 1 and Chapter 2), but add a type of medium after the title to alert the user that special equipment is needed to view the publication.

The extent or length of an audiovisual is an optional component of a reference that may provide useful information to the reader. Provide extent as the total number of physical pieces, such as 387 slides or 1 videocassette. Include the run time if appropriate. Run time (also known as running-time) is the length of the film or program in minutes, such as 2 videocassettes: 140 min. You may provide more physical description details after the extent to give the reader additional information. For example, the size of an audiovisual can affect the equipment needed to view the item. See [Physical Description](#) in the next section for details.

This chapter covers audiovisuals published as individual titles, not journals or journal articles. See Chapter 16 for journals published in audiovisual formats. The chief source for information about an audiovisual is the opening screens. If more information is needed, consult the case housing the audiovisual or any accompanying booklet or other documentation.

Note that the rules for creating references to audiovisuals are not the same as the rules for cataloging them. Records found in the NLM LocatorPlus and the NLM Catalog databases therefore will not always agree with the instructions presented here.
